## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Castaneda in view of Clynych (USPN 6,463,351) and Tower (USPN 5,161,547).

Castaneda discloses a nitinol stent (5:14-25) that is customized for a specific patient by means of three-dimensional imaging or computer tomography (10:55-65). Three-dimensional reconstruction is performed by constructing a three dimensional image of the vessel section using the gathered shape information. Castaneda teaches the stent and method of forming a stent as claimed however Castaneda fails to teach the step of creating a mold or model from the three-dimensional information and wrapping the model with wire to produce a stent. Clynych teaches the method of producing a customized prosthetic model by using three-dimensional data to produce a model to produce a prosthetic that provides a custom fit and is less expensive (1:59-63 and 4:40-47). Clynych fails to teach producing a stent by wrapping wire about the model to produce a patient specific prosthetic. Tower teaches the method of forming a stent by wrapping wire about a mandrel to form a radially expandable stent. Therefore in view of the teachings it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the process as disclosed by Castaneda by using the data from the three dimensional image to generate a model as taught by Clynych and then using the model in a

fashion similar to the mandrel to wrap the wire about and form a customized patient specific endoluminal prosthesis.

### ***Response to Arguments***

Applicant's arguments with respect to claims 2 and 3 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
